1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 6/17/03 has been entered.
2. The amendment filed 6/17/03 has been entered. Claims 36-72 have been canceled. New claims 73-122 have been added. Claims 73-122 are pending in the application.

***Election/Restrictions***

3. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 73-90, 97-101, and 105-115 drawn to a method for replicating a surface relief, classified in class 427, subclass 162+.
  - II. Claims 91-96 and 102-104, drawn to a metal composite with a color print layer, classified in class 428, subclass 201.
  - III. Claims 116-122, drawn to a composite with a surface relief, classified in class 428, subclass 141+.

The inventions are distinct, each from the other because of the following reasons:

4. Inventions II and I are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product, a metal composite with a color print layer and a first layer being adapted to hold at least one surface relief but not specifically holding the surface

Art Unit: 1773

relief, can be used in a process other than replicating a surface relief, such as making a container or packaging having no surface relief pattern.

5. Inventions I and III are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product can be produced by a materially different process such as producing the patterned layer on a transfer film and then transferring the patterned layer to a metal substrate.

6. Inventions III and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination does not require a color print layer. The subcombination has separate utility such as a non-patterned panel for an automotive part.

7. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Art Unit: 1773

8. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
